APPENDIX

JP 60-131609-U is newly cited in the Japanese counterpart patent application on March 13, 2007. The document discloses a valve gear which supports a cam on the output shaft of an actuator, drives a valve by converting the rotational motion to linear motion with the cam, and is able to control opening/closing timings and the rotational speed of the cam on the basis of the operating condition of an engine and various information. Namely, the valve gear is able to control acceleration characteristics of the cam.
